# Instruction Sheet

# VIQUA Lamp and Quartz Sleeve Replacement

**Models:** D4, E4, F4, D4 Premium, Plus Models **Discontinued Models:** A, B, C, D, E, F, B4, C4

### Overview

**UV Lamp replacement:** The amount of UV light created by the UV lamp decreases over time, requiring that the UV lamp be replaced. The system will automatically notify you when it is time to replace the UV lamp.

**Lamp Sleeve replacement/maintenance:** Minerals in the water slowly form a coating on the quartz sleeve. This coating must be removed because it reduces the amount of UV light reaching the water, thereby reducing disinfection performance. If the lamp sleeve can not be cleaned, it must be replaced.

# Section 1 Safety Information

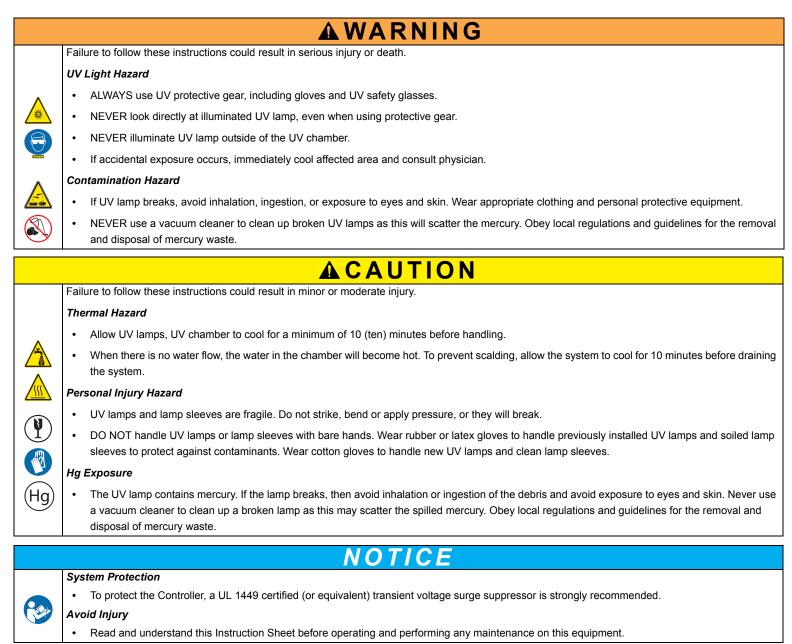

Please read this entire instruction sheet before installation. Pay attention to all danger, warning, and caution statements. Failure to do so could result in serious personal injury or damage to the equipment.

Make sure that the protection provided by this equipment is not impaired. Do not use or install this equipment in any manner other than that specified in the instruction sheet.

# 1.1 Safety Precautions

# ADANGER A DANGER Failure to follow these instructions will result in serious injury or death. A Data Failure to follow these instructions will result in serious injury or death. A Data Shock Hazard - Stored Energy Disconnect power to system before performing any maintenance or repair. There may be more than one source of power. Only connect to a GFCI. Protective ground DO NOT touch with wet hands. Prossurized Device - Impalement Hazard NEVER perform any physical inspection, repair or maintenance on UV chamber unless UV chamber has been isolated and depressurized. NEVER service UV lamps, lamp sleeves or associated hardware until depressurization of UV chamber has been confirmed. DO NOT store any combustible or flammable material close to the system.

#### Maintenance

Warning: This product may contain chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

# Section 2 Maintenance

# **WARNING**

- Always disconnect power before performing any work on the disinfection system.
- Always shut-off water flow and release water pressure before servicing.
- Regularly inspect your disinfection system to ensure that the power indicators are on and no alarms are present.
- Replace the UV lamp annually (or biennially if seasonal home use) to ensure maximum disinfection.
- Always drain the chamber when closing a seasonal home or leaving the unit in an area subject to freezing temperatures.
- During extended periods of no water flow, the water in your chamber can become very hot (Approx. 60 °C) and potentially lead to scalding. It is recommended to run your water until this hot water has been purged from your chamber. Do not allow water to contact your skin during this time. To eliminate this condition, a temperature management valve can be installed at the outlet of your UV system.

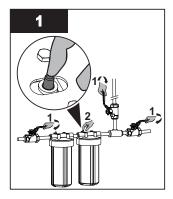

# 2.1 Replacing UV Lamp and Lamp Sleeve

# NOTICE

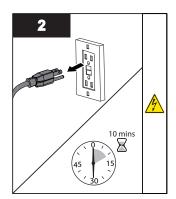

#### Do not use water during replacement of UV lamp.

Lamp replacement is a quick and simple procedure requiring no special tools. The UV lamp must be replaced after 9000 hours of continuous operation (approximately one year) in order to ensure adequate disinfection.

#### Procedure:

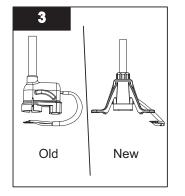

- Close all faucets and water supply.
- Press the pressure button to release the pressure from the cartridges.

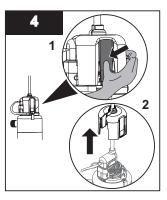

Disconnect main power source and allow the unit to cool for 10 minutes.

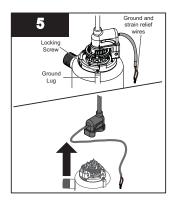

•

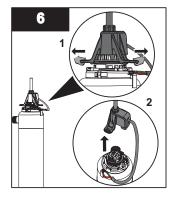

• For older style Lamp Connector follow steps 4 and 5. For new Lamp Connector follow steps 6 and 7.

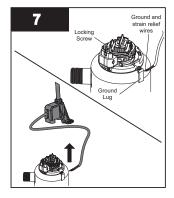

• Remove the safety cap by squeezing the tab.

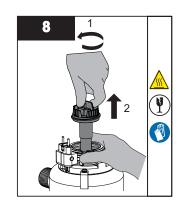

- Unscrew locking screw and remove ground and strain relief wires.
- Remove lamp plug.

 Remove the lamp connector by pulling the tabs out and then upwards.

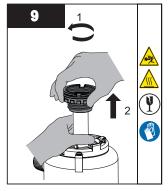

- Unscrew locking screw and remove ground and strain relief wires.
- Remove lamp plug.

 Hold sleeve bolt with one hand and turn lamp counterclockwise and pull the lamp outside the chamber in upward direction.

• Unscrew the sleeve bolt and carefully remove it from the top of the chamber.

**Note:** Sleeve may be attached to sleeve bolt. Hold sleeve with other hand while removing sleeve bolt.

 Place new (grey) sleeve bolt onto the quartz sleeve, carefully push down and hand tighten onto chamber.

 Clean the quartz sleeve with a cloth soaked in CLR, vinegar or some other mild acid and then rinse with water.

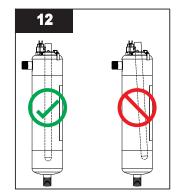

**Note:** If sleeve cannot be cleaned completely or it is scratched or cracked, then replace the sleeve.

 Insert new lamp into the quartz sleeve and thread into sleeve bolt until hard stop.

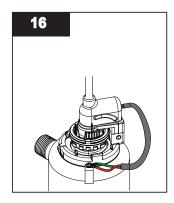

• Place O-ring on the sleeve as shown. Insert the sleeve into the chamber as shown in step 12.

• Ensure quartz sleeve is properly centered in the chamber.

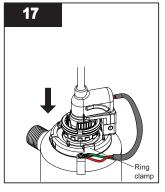

• For older style Lamp Connector follow steps 16, 17 and 18. For new Lamp Connector follow steps 19 and 20.

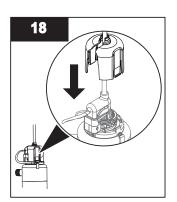

- · Install the lamp plug.
- Attach ground and strain relief wires from the lamp plug to the ground lug located on the chamber.
- Secure both wires with locking screw provided.

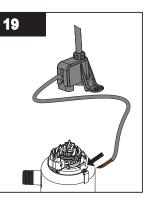

#### Maintenance

• Align connections by rotating ring clamp to push lamp plug onto end of lamp.

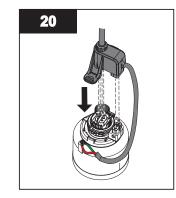

• Install the safety cap.

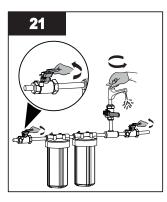

Connect the green ground wire and red strain relief wire to the chamber using the grounding screw.

•

- Align connection pins with the lamp connector by rotating the ring clamp.
- Push the lamp connector down onto the lamp pins and the ring clamp pins until an audible click is heard.
  - **Note:** Ensure the connector is engaged on both sides.

- Open each faucets and turn
   on water supply.
- Inspect for any leaks.
- Perform the disinfection
   procedure. Refer to Owner's
   Manual.
